NOTES

- The figures are subject to change without any legal obligation on the part of the manufacturer.
- The maximum injecting pressure and the maximum holding pressure are attainable maximum set values. These values may be limited by molding conditions and cycle time.
- The injection rate and the maximum injecting speed are calculated values. These values may be limited by set injecting pressures.
- When a screw with wide diameter is used, some resins may not be accepted.
- When the machine is attached with an option, the capacity of the breaker may be changed.
- Figures in [] are optional.
- Three insulated cables with a rated temperature of 140°F are required.
- The cable size is calculated on the condition that ambient temperature is 86°F and metallic conduit work is made.
- The total electric capacity is calculated based on the maximum performance of the drive unit.
- The operating conditions of the injection unit may reduce the total electric capacity.

※1 A transformer (option) is necessary on the machine side.

※2 Use the machine with the maximum voltage of 230V in 60Hz.

It is out of the warranty scope if the electric system is damaged due to the power exceeding above-stated voltage at any time.

The highlighted specifications are recommended injection units.
